ASSOCIATE SYSTEMS ENGINEER

INTRODUCTION:

Cisco Systems is the Internet – It's not just the technology itself but what the internet can do to change the way people work, live, play and learn.

The knowledge and experience of our people is what sets us apart from our competitors. Our success has been built on our pioneering work with the internet protocol-based (IP) network solutions that made up the internet from the first.

Our development programs are designed to provide our talent with the skills to deliver.

DESCRIPTION:

We are currently recruiting for our Associate Systems Engineer (ASE) programme, which starts in August 2007.

We are looking for goal-oriented graduates with drive and ambition. Your experience of working in teams and your commitment to self development are the skills that we require.

If you're flexible and open to change, with a proven track record of work experience then we want to hear from you.

YOUR PROFILE:

- We are looking for graduates with Bachelors or Masters Degrees in Engineering, Computer Science, IT and Technology or similar degrees that can demonstrate structured and analytical thinking
- Basic networking knowledge and experience in different OS is preferred - Knowledge and experience in LAN/WAN architecture, ISO/OSI, protocols (TCP/IP-Protocol-Suite) and an ability to demonstrate technical knowledge and consultative skills will be an advantage
- Our development programme begins with 12 months intensive training in the Netherlands before you relocate to begin your career.
- Fluent English is essential and fluency in at least one other language is required.
